

VenSure® Balloon Dilation System

Fiagon's elegant balloon dilation system, VenSure®, gives surgeons the ability to accurately perform balloon dilation procedures with the added confidence of navigation. VenSure® perfectly complements Fiagon's surgical approach, focusing on optimization and ease of use.

Tip

- Malleable, atraumatic tip to gently palpate and bend to patient-specific anatomy.

Shaft

- Low-profile, responsive shaft to enable optimal tactile feedback and feel.
- Longer working shaft to gives you room reach within difficult anatomy and avoid interference with additional instrumentation.

Balloon

- Affixed 6 x 18 mm balloon with distal tip markers to ensure positioning with every dilation.

Integrated battery-powered LED light fiber

- Confirm position of VenSure® Light balloon through subcutaneous transillumination.

VenSure
Light

Controlled Slider Advancement

- Engineered with a symmetrical design for optimal balance and 5 mm distal markers for precision advancement.
- Avoid interference with endoscope due to being in-line with the balloon.
